## INTRODUCTION

**Welcome to trackZEON; Motorola's online GPS location service for the Zeon Digital network.**

Zeon Digital radios are amongst the few two-way radios in Australia with inbuilt GPS, enabling you to locate your employees 24/7 on web based maps, to improve safety and fleet efficiency.

A driver's location can be identified in real-time to help you keep customers completely informed and your team safe.

GPS history replay also lets you trace a team member's movements from the past month to improve route planning, prove compliance or assist with incident investigations.

The following user manual will guide you through each trackZEON feature step-by-step to enable you to get the most out of this intuitive interface.

**Enjoy the convenience of using a single device for both communications and a GPS location service.**

## TRACKZEON'S TOP 10 FEATURES

trackZEON gives you the capability to...

1. **Find your radios.**  
See where your entire team is on the map or drill down to get more precise location details for individual team members.
2. **Handle emergencies better.**  
Pinpoint the location of a team member in an emergency! trackZEON's reporting feature also ensures there is a paper trail describing how the emergency is handled and by whom.  
[What happens in an emergency?](#)
3. **See where your resources have been.**  
Re-create the trail for where your team has travelled to over the past month. Export the data to Google Earth for a fully photographic view.  
[Resource History](#)
4. **Dispatch jobs.**  
Use trackZEON to exchange text messages with a single person or your entire team. 'Message history' keeps track of the information exchanged.  
[Messaging](#)
5. **Find a street.**  
Search for and find a street with ease.  
[Street Search](#)
6. **Find the closest radios to any position on the map.**  
Right-click to find the closest team member to that point on the map.  
[Show Closest Units and Hide Closest Units](#)
7. **Get directions.**  
Get directions for how to get from 'A' to 'B' via Google Maps.  
[Directions From Here, Directions To Here](#)
8. **Map customisation.**  
Tag important landmarks, customers or suppliers to give your maps better perspective.  
[Tag Map Here](#)
9. **Create 'smart zones'.**  
Establish zones around your map tags to stay informed of when team members have entered that area; an excellent tool to prove services rendered.  
[Tag Map Here \(Smart Zones\)](#)
10. **Access more comprehensive reports.**  
trackZEON is capable of retrieving GPS data for any radio for up to one month in the past to create a range of automated reports.  
[Reports](#)

## USER ACKNOWLEDGEMENT

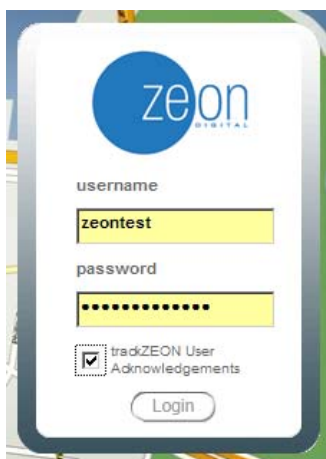

The following user acknowledgements must be accepted prior to logging in trackZEON. Acceptance is indicated by ticking the trackZEON User Acknowledgements box within the login field, shown below.

Zeon Digital provides the trackZEON service on an 'as is' basis. Zeon Digital does not warrant or guarantee:

- the accuracy of any location provided through the service;
- the accuracy or timeliness of any event reported through the service;
- the accuracy, completeness or currency of any map on the service;
- the timely or secure delivery of messages sent through the service;
- the performance, availability or security of the service; or
- the suitability of the service for any purpose.

Zeon Digital will not be liable for any loss, damage, claim, expense, cost (including legal costs) or liability arising in any way (including from negligence) from your use or non-use of the service or your reliance upon location, event or map information obtained through the service.

*Example of login window with trackZEON User Acknowledgements ticked*

## TERMS OF SERVICE FOR GOOGLE MAPS

Zeon Digital provides the capability to export data that may be imported into Google Maps. By using Google Maps and any data or information accessed from Google Maps, you agree to be bound by **Google Terms of Service** as well as these additional terms and conditions. For individual users, Google Maps, including local search results, maps, and photographic imagery, is made available for your personal, non-commercial use only. For business users, Google Maps is made available for your internal use only and may not be commercially redistributed, except that map data may be accessed and displayed by using the **Google Maps API** pursuant to the API terms and conditions. Reference site: [http://maps.google.com/help/terms\\_maps.html](http://maps.google.com/help/terms_maps.html)

## TERMS OF SERVICE FOR GOOGLE EARTH

Zeon Digital provides the capability to export data that may be imported into Google Earth. Google Earth requires users to agree and adhere to Google Earth terms and conditions prior to use.

## MINIMUM COMPUTER REQUIREMENTS

The following hardware and software requirements will enhance trackZEON's performance:

### Web Browser

Internet browsers that support trackZEON include Safari, Chrome, Internet Explorer and Firefox.

trackZEON may perform better using Safari than other internet browsers. Safari 3.1.1 can be downloaded from <http://www.apple.com/safari/download/>. If you wish to establish a shortcut from your desktop to operate trackZEON using Safari, please follow the instructions below:

*Go to your desktop to start the following process.*

*This is the location where your shortcut link to trackZEON will be established.*

1. Right click on the desktop.
2. Select New -> Shortcut.
3. In the dialogue box that appears, select BROWSE. Find the location where you have downloaded Safari to your computer and select. The default location is: C:\Program Files\Safari\Safari.exe.
4. Click NEXT.
5. Label the shortcut e.g. trackZEON.
6. Click FINISH.
7. Right click on the newly created shortcut and select PROPERTIES.
8. In the dialogue box that appears, find the target field. By default it will read: "C:\Program Files\Safari\Safari.exe"
9. Add the following text to the end, so that the target field reads:

"C:\Program Files\Safari\Safari.exe" - URL <http://www.trackzeon.com.au>

*N.B. Ensure a space is left before you add the additional text.*

10. Select OK to finish.

Clicking this shortcut will automatically navigate to the trackZEON login page using Safari, without interfering with the internet browser you may use for other applications.

### Applications

MS Excel 2003 or later.

### Internet Connectivity

A connection to the Internet is required to access the service, preferably a high-speed broadband connection. At a minimum, high-speed dial-up connectivity is required. Proxy servers must not strip off unknown http headers.

### System Requirements

System requirements are highly dependent upon the number of resources allocated to your trackZEON login and the browser you choose to use.

Suggested minimal requirements, for the following resource quantity brackets, include:

#### 1-50 Resources

CPU: 1.8 GHz  
RAM: 768 Mb

#### 51-100 Resources

CPU: 2.4 GHz  
RAM: 1 Gb

#### 101+ Resources

CPU: Intel Core 2 Duo 1.8 GHz or greater  
RAM: 2 Gb

## LOG IN

A unique user name and password is given to all trackZEON customers to provide you with exclusive access to view the location of your Zeon Digital radios online. Your unique user name and password will be provided to you by your Zeon Digital dealer.

1. Access trackZEON at [www.trackzeon.com.au](http://www.trackzeon.com.au)
2. Type in your user name and password.
3. trackZEON will display your Zeon Digital radios on screen.
  - The map will automatically zoom to an appropriate level that encompasses all of your Zeon Digital radios with GPS lock.
  - Each radio will display its last known location including status, date and time stamps.

trackZEON can have improved performance in Safari.  
Be aware that the "Back" button in all browsers will log you out of trackZEON.

## CHANGING YOUR PASSWORD

trackZEON users are able to change their contact details and password via the trackZEON interface. Selecting Account in the top right hand corner of the screen will open a new page containing the following two tabs:

- Account details – a record of the contact information for your primary trackZEON administrator.  
The nominated email address will be used by Motorola to issue new passwords (See Change Password below) and to send trackZEON updates. Email addresses are strictly for use by Motorola only.
- Change password – to change your password to any password of your choice.
  - Only one password is applicable per trackZEON login; it is important to advise all trackZEON users of the active password to ensure their access is not impeded.

If you forget your password, please call Motorola on 1300 936 648 within business hours and a new, randomly selected password will be emailed to the email address saved within your account details.

## OPERATIONAL INFORMATION

Throughout this user manual a Zeon Digital two-way radio is referred to as a 'resource'.

### How do resources update their location? (Events and Status Icons)

#### Events

An 'event' is a pre-defined trigger for a Zeon Digital radio to update its GPS location by sending a poll of its position to trackZEON. The default 'event' settings are:

- Time: every 10 minutes.
- Distance: every 1 kilometre.
- Emergency being initiated (the radio will continually update its location until the emergency is disengaged.)
- The radio being switched off.
- Transmit Inhibit being enabled or disabled.

Each event is matched with a time and date stamp to give a precise indication of when that event occurred. This information is stored by trackZEON for up to one month.

#### Status Icons

Events (or triggers) also determine what is referred to as the 'status' of the radio, indicated on screen using different, easy-to-identify icons. These status icons are:

	Green Arrow: Indicates the radio is on. (this is the default icon to display the location of a radio on the map)
	Emergency: Triangle with an exclamation mark, flashing alternately between red and yellow. This icon indicates the radio's emergency button is engaged, and persists until both the radio user and the trackZEON operator have cleared the emergency state.
	Universal Off symbol: Indicates the radio is turned off.
	TXI: Indicates the radio has transmit inhibit mode enabled.
	Low Battery: Indicates when a radio's battery level is less than 10%.
	Out of Coverage: Indicates a radio has lost GPS coverage.

#### Additional Status Icon

The following status icon is not triggered by an event as per the above.

	Message: Indicates that an unread message has been sent by this radio to trackZEON.
---	---

At all times the radio must have GPS lock to update its location on trackZEON.

### GPS Coverage versus Radio Frequency Coverage

Zeon Digital radios send two types of location and status updates to indicate the radio's last known position for:

1. *GPS coverage*  
When the radio has GPS lock and is capable of updating its physical location on trackZEON via satellite. GPS coverage is not always available due to loss of satellite signal, the radio going undercover, or a number of other factors external to the radio itself.
2. *Radio Frequency (RF) coverage*  
When the radio has RF coverage for voice communication.

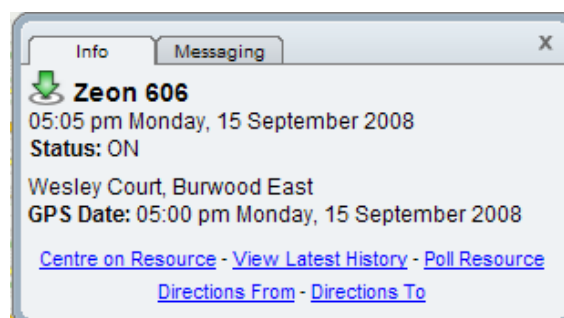

It is important for trackZEON operators to be able to discern between the two sets of location and status updates in order to more accurately interpret the information displayed on trackZEON.

The following example explains how this information is displayed in the radio information box.

*Example*

*A courier driver delivers a package to a building. He is detained within the building for five minutes waiting for his receipt. As he is still within RF coverage of the Zeon Digital network, the status of his radio remains as 'on' with the radio's RF coverage time and date stamps continuing to update accordingly.*

*When he entered the building however, he did lose sight of GPS satellites and lost GPS lock on his radio. The time and date stamps for the address shown therefore indicate the last known location for when the radio had GPS coverage.*

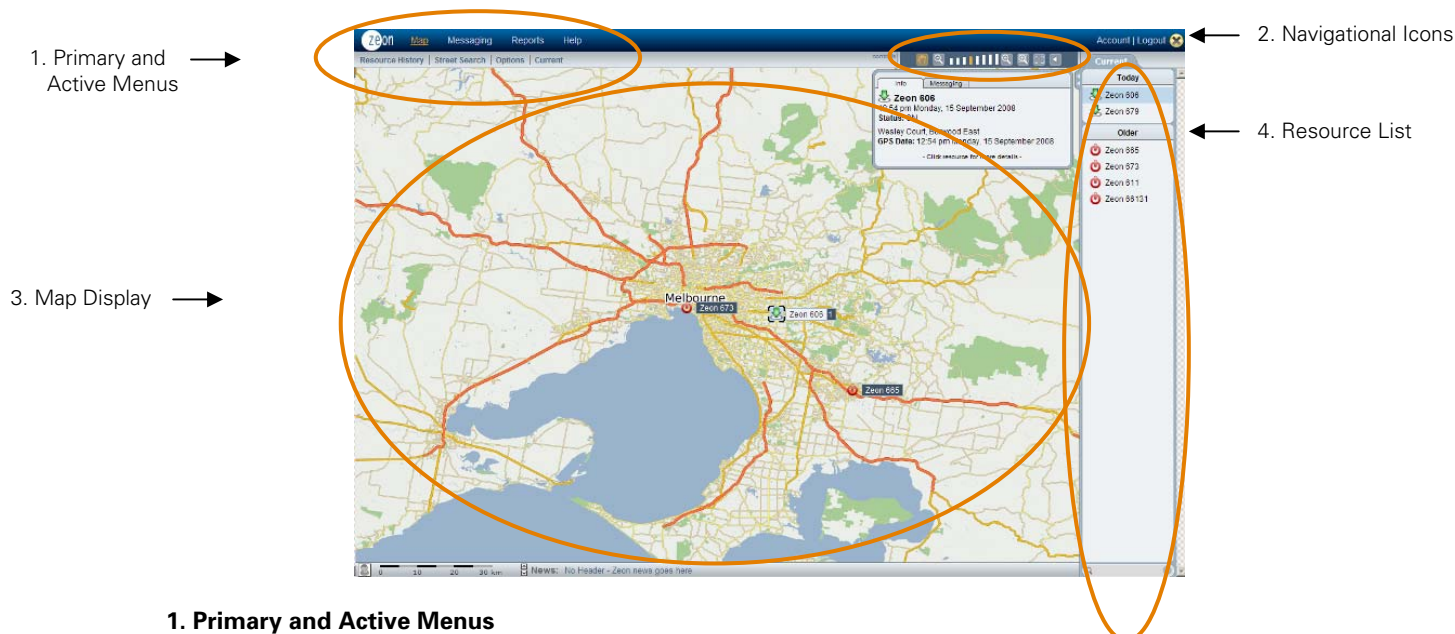

A radio that loses both GPS and RF coverage will not be capable of sending any updates to trackZEON.

## TRACKZEON INTERFACE

trackZEON uses a concise interface that includes:

1. Primary and Active Menus
2. Navigational Icons
3. Map Display
4. Resource List

### 1. Primary and Active Menus

The primary and active menus include four headings each, to provide different functionality to navigate and manage trackZEON. The functionality for each of these headings is explained in greater detail, in respectively named sections, throughout this user manual.

### 2. Navigational Icons

The navigational icons allow you to move the map as required. These are:

#### Navigate Map

This function allows the user to move the map in any direction.

#### Zoom Out

Click for a wider view of the map.

#### Zoom In

Click for a closer view of the map.

Each time you click on Zoom In or Zoom Out, the zoom level (below) will move one space. The active zoom level is indicated by the green bar.

You can also jump to your desired zoom level by clicking directly on any bar in the zoom level (below).

1:5000000 to 1:5000  
Zoom Out to Zoom In

#### Rubber Zoom

The rubber zoom allows you to select a specific area you wish to zoom in to.

Click and hold to draw a square around the area you wish to zoom in to.

The map will automatically centre on this area and zoom to the lowest level available, depending on square size drawn.

#### Return to Extents of all Events

This icon will automatically adjust the map to show all resources.

#### Return to Previous Map

Selecting this icon, will automatically re-centre and adjust the map to its most recent view.

### 3. Map Display

The map display refers to the graphical display of your radios on the map.

### 4. Resource List (and Resource Information Box)

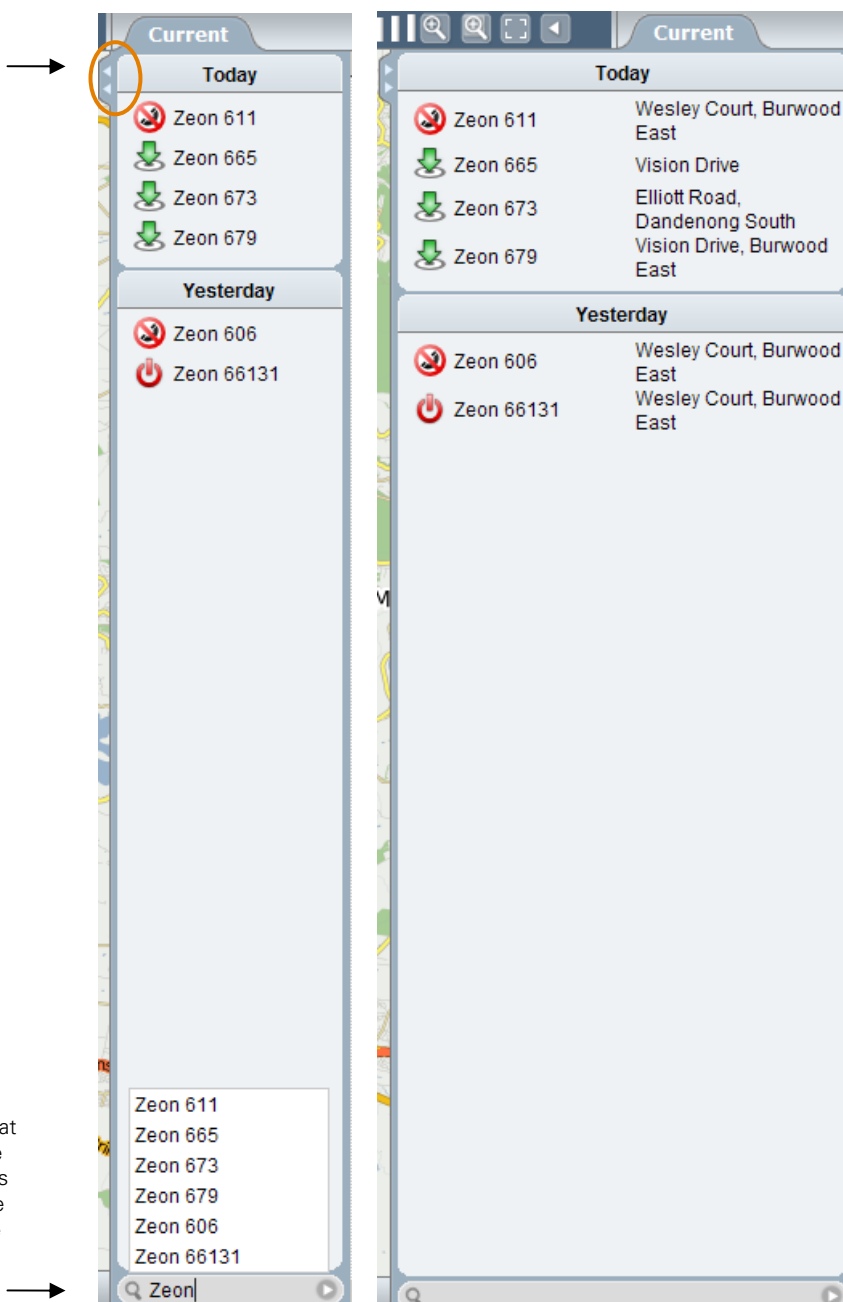

All resources allocated to your trackZEON login are listed in the resources column on the right-hand side of the screen.

- Each resource is listed, with its status icon, alphanumerically.
- Radios are categorised by the most recent activity, being either Today, Yesterday or Older, in order to quickly determine which radios are active.

The contracted (default) view of the resources column lists the resource name and status icon. The expanded view also provides the last known GPS location.

*Examples of the contracted and expanded views of the resources column*

Click on these arrows to change the column view.

It is possible to search for a specific resource via a search field at the bottom of the resource list. This is a useful feature to find a resource quickly versus scrolling through the entire list.

### Resource Information Box

Placing your cursor over any radio ID within the resource list will open the relevant resource information box containing the following two tabs:

- Info
- Messaging

#### Info

The Info tab provides the following information:

- Radio ID with its status icon.
- Time and date stamps for its last known event.
- Address details for its last known GPS location.
- Time and date stamps for its last known GPS location.

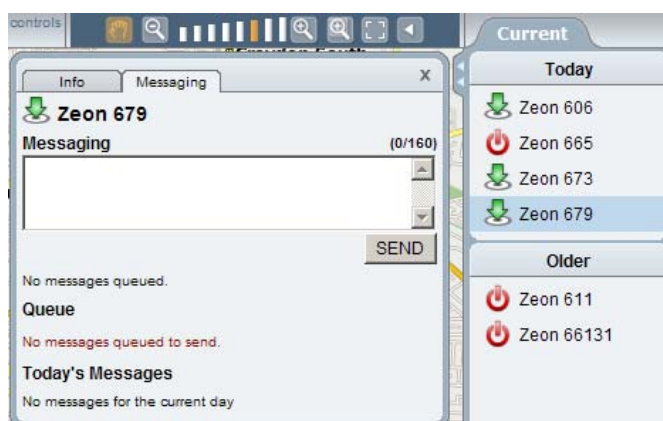

The five hyperlinks at the bottom of the resource information box also provide direct interaction with the selected resource to:

- Centre on Resource  
This link will automatically adjust the map to zoom in and centre on the radio. This feature is useful to quickly determine the last known GPS location of the radio.
- View Latest History  
This link will create an audit trail of the resource's most recent activity. This feature is useful to quickly determine the resource's last activity, particularly if you are unsure of the date the radio was last active.
- Poll Resource  
Selecting Poll Resource will update the resource's location and status in real time.
- Directions From and Directions To  
These two links will allow you to establish directions to or from the resource to another location via Google Maps. See Options in this user manual for further details.

#### Messaging

Selecting the messaging tab allows you to send messages directly to the selected radio without the overhead of using the messaging link in the menu bar.

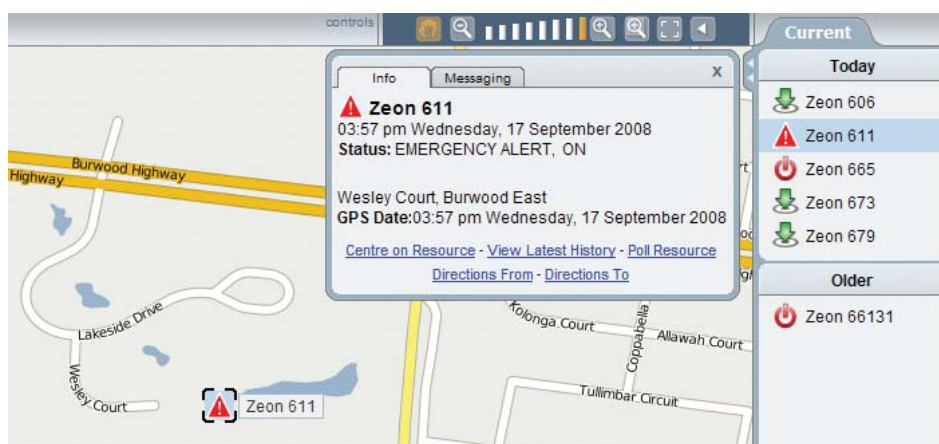

- The messaging box will turn red if the character limit is exceeded.
- If the message is not successful (if the radio is off or out of range), the message will go into the message queue and will be forwarded to the resource once it is again within coverage of the Zeon Digital network.
- All messages, sent and received by the selected resource, will automatically update under 'Today's Messages'.

## WHAT HAPPENS IN AN EMERGENCY?

Zeon Digital's two-way radio's emergency button gives staff the peace of mind they can call for help at the touch of one button. Integrating the emergency button with GPS also means that employees can be located quickly on a web-based map, so help can be sent in an emergency.

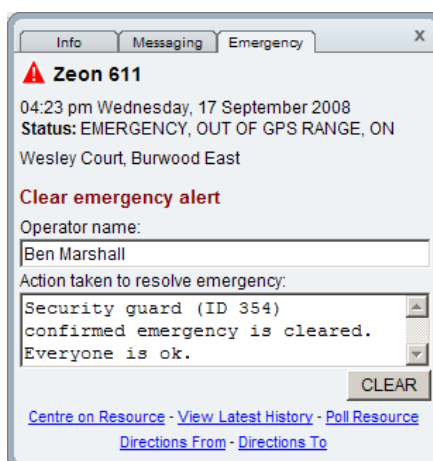

- trackZEON provides visual alerts and location details on screen for a resource which has emergency engaged.
- trackZEON will automatically pan and zoom in, to centre on the resource's location, highlighted by a flashing red and yellow status icon.

*Example of the trackZEON display for a resource with emergency engaged*

The resource information box will also introduce an emergency tab in order to create a log of how the emergency is responded to. The emergency tab will request the trackZEON user to enter his or her name and a description of the action taken.

*Example of the radio information box emergency tab with details entered*

It is possible to create a report of:

- The emergencies that have been engaged, for any resources, for a specified period.
- The action taken by trackZEON operators responding to an emergency.

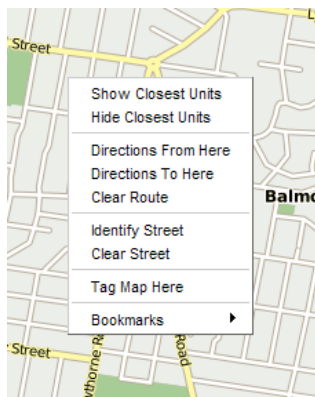

See Reports in this user manual for further details.

An emergency status for a resource cannot be cleared within trackZEON until it is firstly cleared by the radio operator. This is a health and safety feature to ensure the emergency is not mistakenly cleared before the radio operator confirms the emergency state no longer exists.

## RIGHT CLICK FUNCTIONALITY

'Right-clicking' your mouse on any part of the trackZEON map will create a drop down menu containing the following parameters:

### Show Closest Units and Hide Closest Units

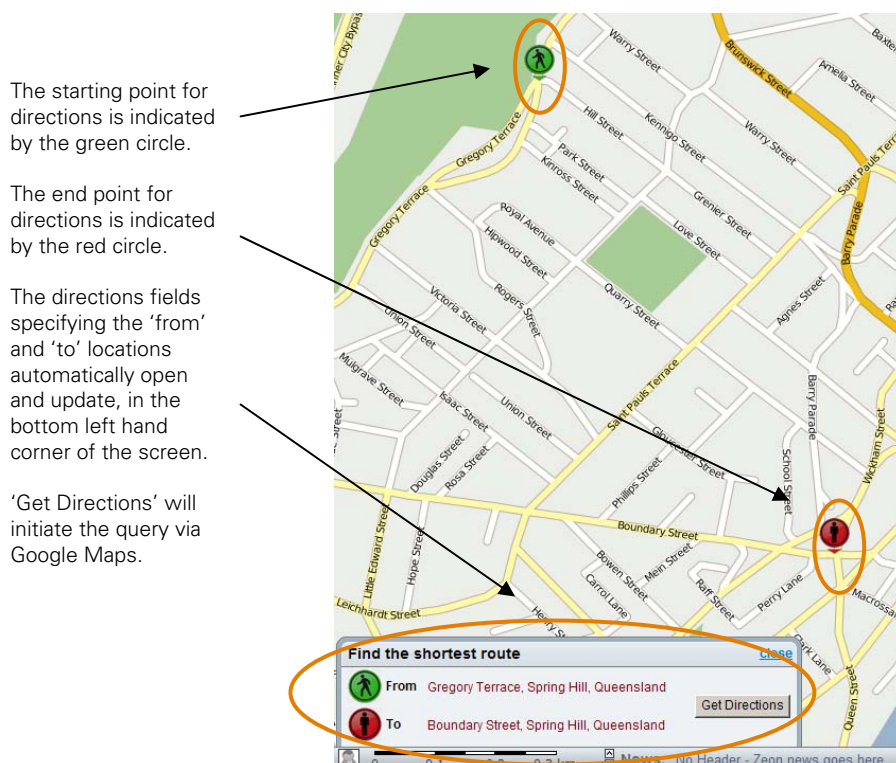

Under Options in the sub-menu bar, you have the capability to 'hide' your resources on the map to reduce the amount of information presented on the map and make it easier to read. This is a particularly useful feature if you have a lot of resources displayed on trackZEON. See Options later in this user manual for further details.

After you have established your preferred settings under the Options menu, these two right click functions will activate this function to 'show' or 'hide' the closest resources from the location where you have 'right-clicked' on the map.

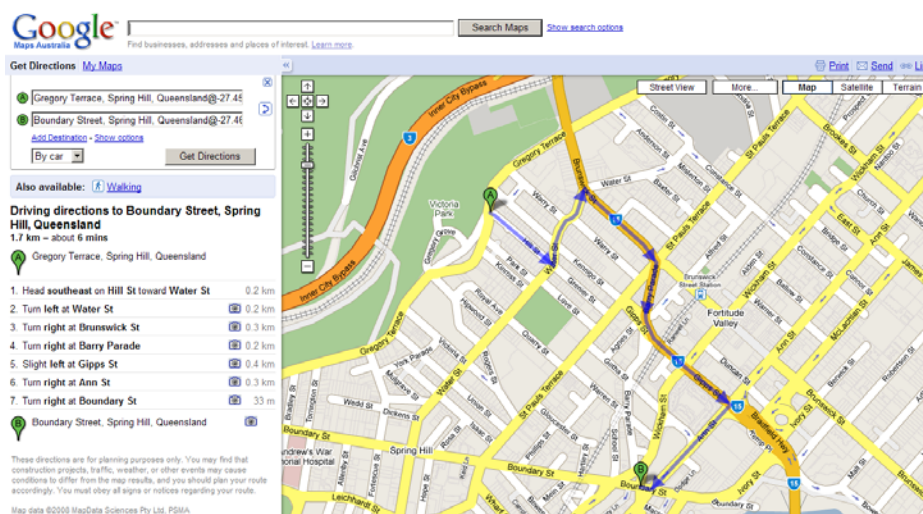

### Directions From Here, Directions To Here and Clear Route

trackZEON gives you have the capability to obtain the directions between 'A' to 'B' via Google Maps. Directions can be provided between any two points on the map (including map tags), between any two resources, or between a resource and any point on the map.

*Example of obtaining directions between two points on the map*

### Example of query results via Google Maps

#### Obtaining directions between two points on the map

1. Select the location on the map from where you wish to start obtaining directions.
2. Right click and select 'Directions From Here'. The directions field will automatically open and update, in the bottom left hand corner of the screen.
3. Select the location on the map to where you wish to end the directions.
4. Right click and select 'Directions To Here'. The directions field will automatically update, in the bottom left hand corner of the screen.
5. Google Maps will open in a new window with detailed directions and a graphical display of the route.

To use a map tag as a start or end point for your directions, click on Street Search in the menu bar, select the appropriate map tag and click 'From here' or 'To here' within the map tag to start or end the directions respectively.

#### Obtaining directions between any two resources

1. Click on the resource in the right-hand resource column from which you wish to start obtaining directions.
2. The selected radio's information box will open.
3. Click on 'Directions From'. The directions field will automatically open and update, in the bottom left hand corner of the screen.
4. Click on the resource in the right-hand resource column to which you wish to end the directions.
5. The selected radio's information box will open.
6. Click on 'Directions To'. The directions field will automatically update, in the bottom left hand corner of the screen.
7. Click on 'Get Directions'.
8. Google Maps will open in a new window with detailed directions and a graphical display of the route.

#### Obtaining directions between a resource and a point on the map

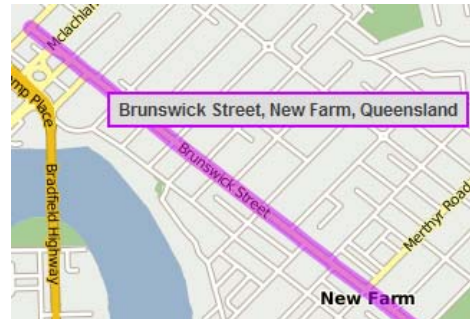

1. Click on the resource in the right-hand resource column from which you wish to start obtaining directions.
2. The selected radio's information box will open.
3. Click on 'Directions From'. The directions field will automatically open and update, in the bottom left hand corner of the screen.
4. Select the location on the map to where you wish to end the directions.
5. Right click and select 'Directions To Here'. The directions field will automatically update, in the bottom left hand corner of the screen.
6. Google Maps will open in a new window with detailed directions and a graphical display of the route.

### Identify Street and Clear Street

Right-click on any street and select 'Identify Street' to highlight this street on the map and specify its name, suburb and state.

*Example of identifying a street on the map*

Selecting 'Clear Street' will remove the highlight of that street from the map.

### Tag Map Here

A map tag allows you to mark a specific location on the map. You may create map tags for frequently visited locations or to mark important land marks to give your trackZEON maps better perspective and make them easier to read.

### Smart Zones

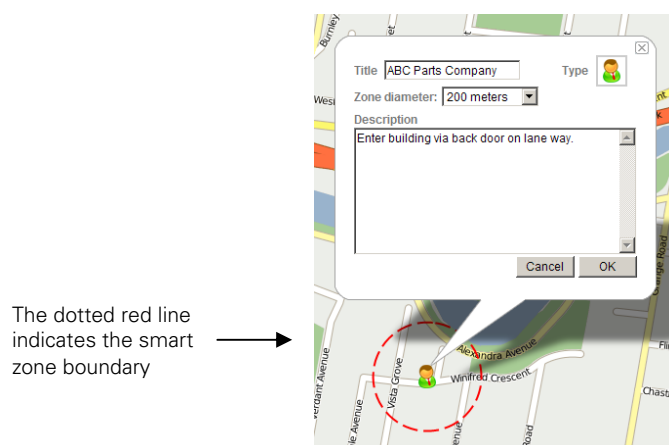

Defining a 'smart zone' around your map tag also gives you the ability to 'track' resources being present within that defined area. This is a useful feature if you wish to produce a compliance report to prove that a particular location was visited within a given date and time. For example, a security firm may create a smart zone around each of its customers' locations and produce a report at the end of each month to prove each location had been visited, as per their security contract. See Reports in this user manual for further details.

A resource's presence within a smart zone is however only recorded if the radio sends a poll of its GPS location whilst within the smart zone area. This may occur as a matter of course, as per the radio's standard location update settings, or can be performed manually by programming a single-push button on the radio to act as a 'polling button' which will force the radio to update its GPS location with trackZEON, when pressed.

### Inserting a Map Tag

1. Right click on the location where the map tag is to be placed and select 'Tag Map Here'.
2. The map tag configuration box will open:
  - Title: enter the name of the map tag (e.g. a customer name, an address, etc)
  - Zone diameter: define the radius of the smart zone around this map tag.
  - Description: enter important information relating to the tag (e.g. "phone customer on 03 9877 5555 before delivery")

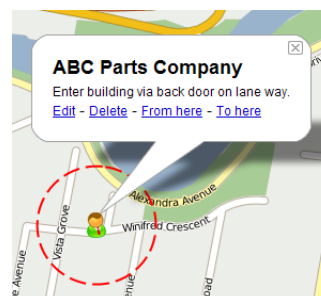

*Example of the map tag configuration box*

Example of a map tag on screen

The map tag's description and smart zone (if defined) will appear when you place your cursor over the tag's icon

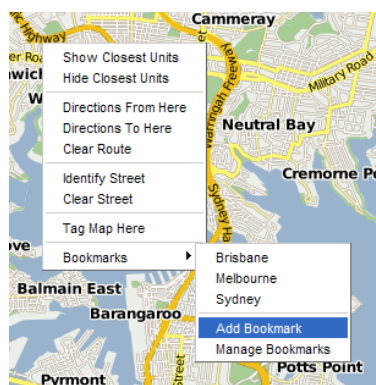

Map tags are automatically listed as a shortcut under street search.

## Bookmarks

trackZEON's bookmarks allow you to 'mark' a location on a map. The concept is very similar to map tags, although bookmarks are not visible on a map but act as a means to jump to a pre-defined location quickly. Brisbane, Sydney and Melbourne are default bookmarks within trackZEON.

### Inserting a bookmark

1. Right click on the location (at the appropriate zoom level) that you wish to bookmark and select 'Add Bookmark'.

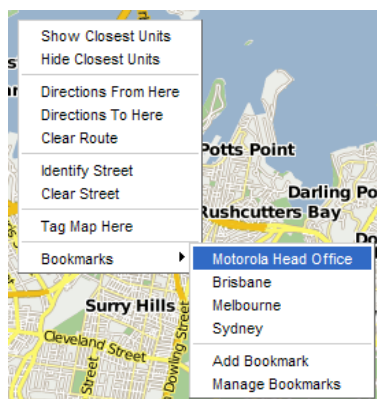

2. The 'Add Bookmark' configuration box will open to allow you to name your bookmark.

**Add new bookmark**

**Name:**

**Position:** Lon: 151.1988191539202  
Lat: -33.85237966142401  
Scale: 1:50000

3. New bookmarks are automatically added to your bookmark list, accessible via right-click.

4. You can later manage your bookmarks by right-clicking anywhere on the map and selecting 'Manage Bookmarks'. The following box will open:

# Active Menu

## RESOURCE HISTORY

trackZEON provides you with the ability to create an instant action replay of a radio's movements from within the past month. Selecting Resource History in the menu bar will create a drop down menu containing the following parameters:

- Resources (drop-down menu containing the list of available radios).
- Date (default is today's date).
- Time period (hour and minute options to refine results; All (default) will produce all results for a single day).
- "Google View" and "History View" are explained in greater detail below.

*Example of the Resource History drop down menu*

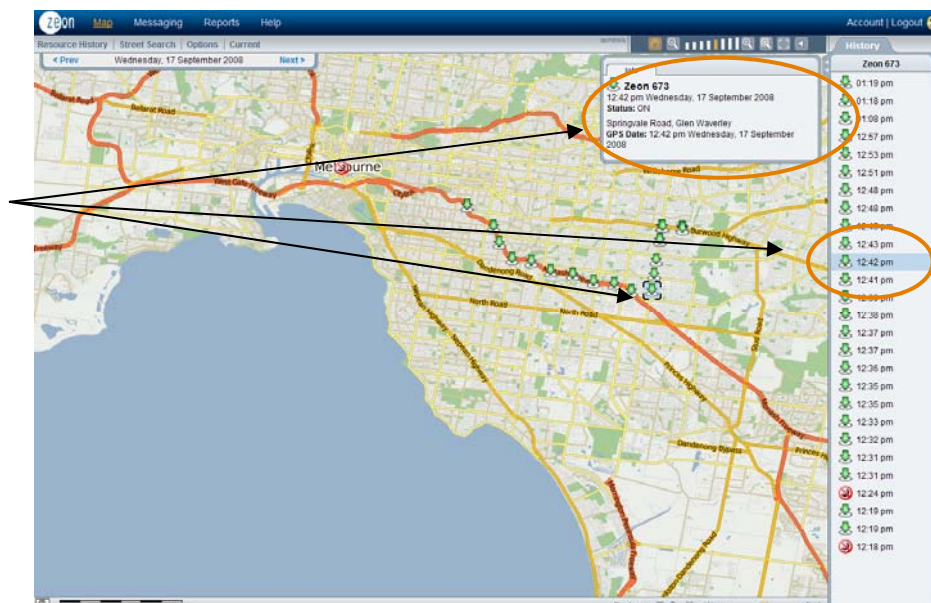

### History View

Clicking "History View" will display an audit trail of the radio's movements, indicated on the map by a trail of the radio's status icons, together with a list of corresponding time stamps in the right hand history column.

*Example of an audit trail created via History View*

Placing your cursor over any time stamp within the history column will provide you with the radio's address in the radio information box and highlight the corresponding location within the audit trail on the map.

A flashing icon within your audit trail indicates the last known location for the resource within the audit trail. This feature may be switched on and off via the Options menu.

See Options/ Show notifier (in Resource History) for further details.

In the bottom right hand corner, the History Replay toolbar gives you greater control to 'replay' a radio's movements on screen.

- Play will start the historical journey of the radio.
- Stop will stop the replay and revert to a display of the entire audit trail on the map.
- Pause will freeze the replay.
- Speed slider will control the speed of the replay.

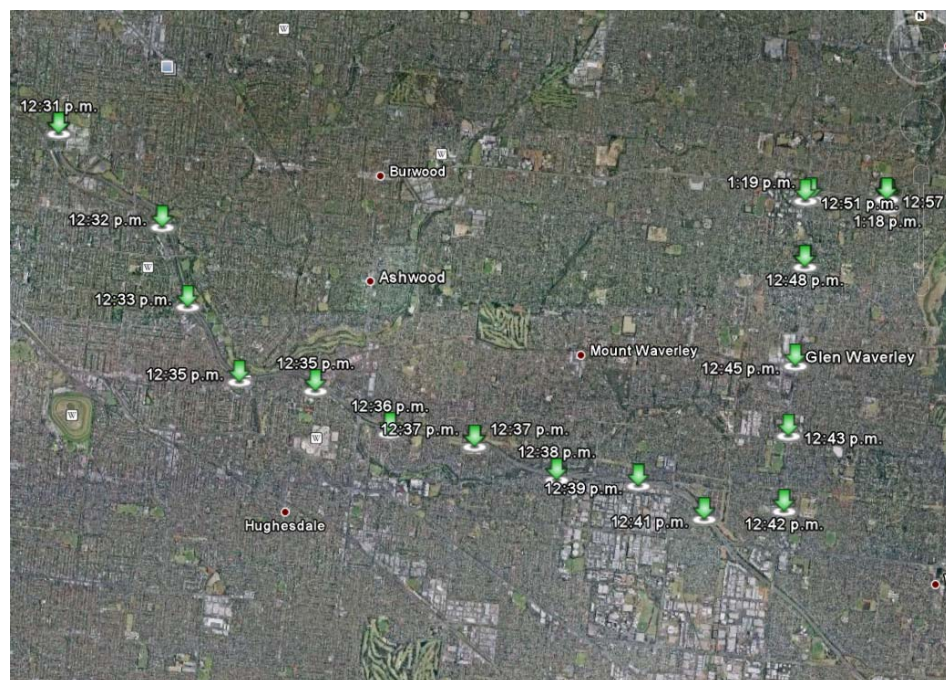

### Google View

"Google View" will export the query results into a kml file that can be imported into various mapping programmes, including Google Earth.

Please see the below steps for importing mapping data into Google Earth:

1. Download Google Earth from: <http://earth.google.com/> (you will be required to agree and adhere to Google Earth's terms and conditions).
2. Run the Google Earth installer.
3. Click on Resource History / Google View to export the resource's audit trail into a kml file.
4. Save the kml file on your computer.
5. Open the kml file within Google Earth.
6. Google Earth will graphically display the audit trail on the map.

*Example of the same audit trail (above) created via Google View*

## STREET SEARCH

trackZEON has the ability to search for specific streets to make it easier to dispatch jobs and provide directions.

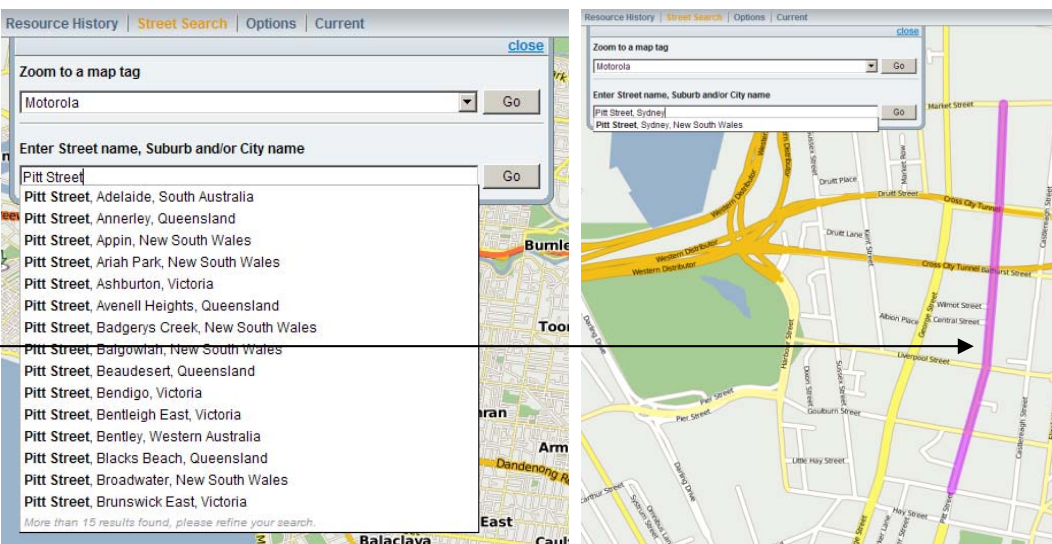

Selecting street search in the menu bar will create a drop down menu containing the following parameters:

- Zoom to a map tag  
A shortcut to jump to a map tag's location in one step (the map tag must be previously defined – see Right Click Functionality in this user manual for further details).
- Enter Street name, Suburb and/or City name  
Select a street from the list of options provided (specific street numbers are not searchable).

*Examples of the Street Search drop down menu and the street highlighted on the map*

trackZEON will give you a list of options for the street you have specified.

Once selected, the map will zoom in and highlight the street.

Once three characters are entered into the street search field, trackZEON will dynamically short-list the possible matches to select from.

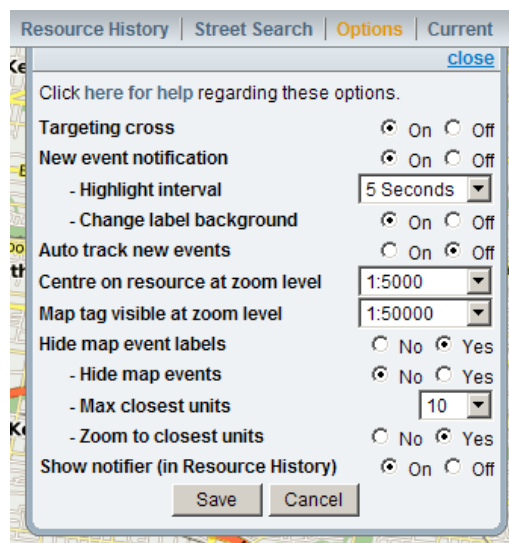

You will be advised if trackZEON is unable to find the street or suburb name requested.

## OPTIONS

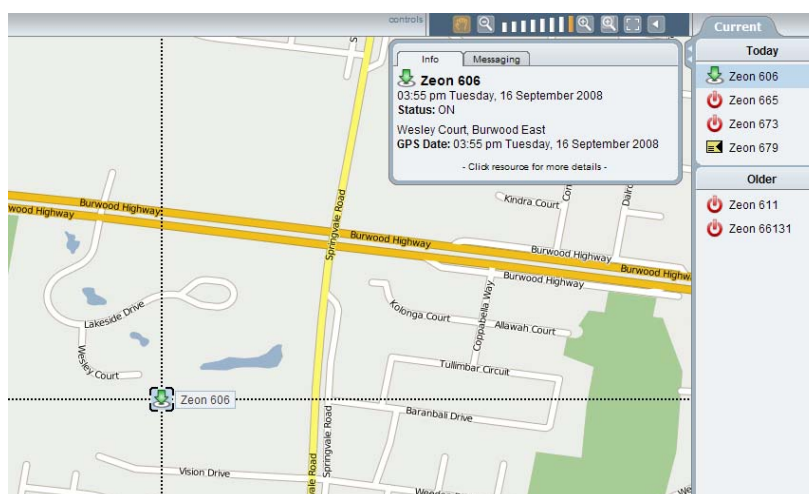

A number of customisable features exist within the trackZEON interface. Selecting Options in the menu bar will create a drop down menu containing the following parameters:

*Example of the Options drop down menu*

### Targeting cross

This feature 'targets' the resource on the map, when you roll over the resource's name in the right-hand resource list. This is a useful feature to quickly find a radio within the mapping display.

### New event notification

Any time a new 'event' is received from a resource, for example a radio may be switched off, trackZEON can establish a visual alert of the event change. This feature is useful to remain aware of what each of your resources is doing.

Selecting 'on' for 'new event notification' will change the background colour behind the relevant radio's name within the resource list. Additional visual alert options include:

#### *Highlight interval*

This option allows you to define the time frame for which the background colour is changed.

#### *Change label background*

This option allows you to also change the colour of the resource's ID tag on the mapping display and to temporarily highlight this resource on the map if the option to 'hide map events' (explained in detail later within this section of the user manual) is activated.

### **Auto track new events**

Activating this feature will ensure trackZEON checks that any time a resource updates its GPS location, the resource itself has not moved outside the visible map area on screen. If the resource has moved beyond this area, trackZEON will automatically zoom out to the extents of all resources to ensure your entire team is visible on screen.

This feature is best used when monitoring resources only as the display will continually and automatically change its view, based on the location of your resources. Turn this feature off if you wish to maintain control of the zoom level of your mapping display.

### **Centre on resource at zoom level**

This feature allows you to specify the appropriate zoom level when 'centre on resource' is selected in the resource information box. The default setting is 1:5000.

Placing your cursor over the zoom level indicator in the controls menu will highlight the scale for each level.

### **Map tag visible at zoom level**

This feature allows you to specify the appropriate zoom level to display map tags on the map. The default setting is 1:50000.

### **Hide map event labels**

trackZEON gives you the capability to 'hide' your resources on the map to reduce the amount of information presented. This is a particularly useful feature if you have a lot of resources displayed on trackZEON.

Selecting 'yes' for 'hide map event labels' will hide each resource's ID tag on the mapping display. Additional options related to this function include:

#### *Hide map events*

This option will also hide each resource's status icon on the mapping display (in addition to hiding the ID tag).

Placing your cursor over the resource's name in the resource list will however highlight the location of this resource on the map. You can retain visibility of a resource on-screen by right-clicking on the resource's name in the resource list: the name will be underlined and turn bold. Right-clicking a second time will hide this resource again.

#### *Max closest units*

This option will specify how many of the closest units you wish to view when you right-click anywhere on the map and select the 'Show Closest Units' function. See Right Click Functionality in this user manual for further details.

#### *Zoom to closest units*

This option will force trackZEON to automatically zoom in or out to display the 'max closest units' on the mapping display. See Max Closest Units above for further details.

Resources with emergency engaged will automatically display on the map, irrespective of the 'hide map event label' settings.

### **Show notifier (in Resource History)**

This feature will highlight the last known location for a resource within an audit trail (created by selecting 'History View' under 'Resource History'). This is useful to quickly determine the resource's last known GPS location within the audit trail.

## CURRENT

Selecting Current in the menu bar will revert trackZEON to the mapping page.

# Primary Menu

## MAP

Selecting Map in the menu bar will revert trackZEON to the mapping page, including a complete refresh of the data for each resource. This option will take longer to return to the mapping page than selecting 'Current', to allow trackZEON to interpret the new incoming data.

## MESSAGING

trackZEON enables you to send and receive text messages to and from your radios in the field.

Selecting Messaging in the menu bar will open a new page containing the following options:

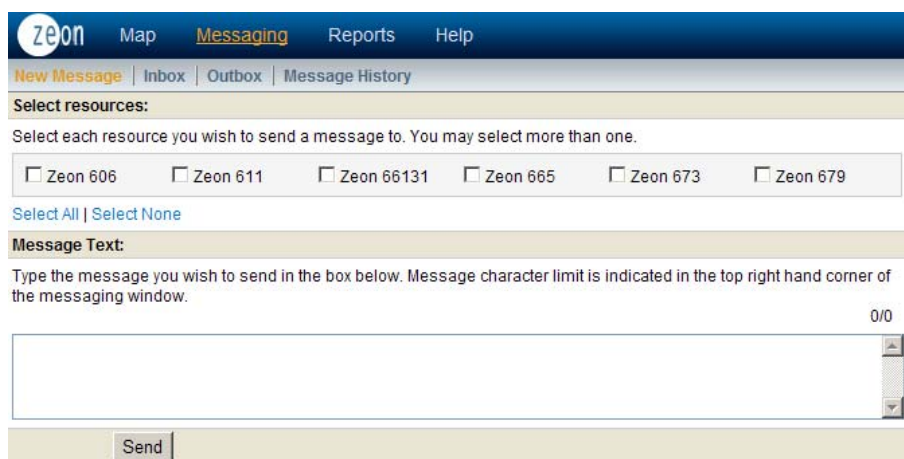

- New Message
- Inbox (default messaging view)
- Outbox
- Message History

### New Message

trackZEON provides you the ability to send messages one-to-one or one-to-many. Selecting New Message in the menu bar will create a drop down menu containing the following parameters:

- Select Resources  
You may choose all resources, or manually select the individual resources, you wish to send a message to.
- Message Text  
You may type your message text within this box.

*Example of the New Message interface*

 A screenshot of the 'New Message' interface. At the top is a navigation bar with 'zeon', 'Map', 'Messaging' (highlighted), 'Reports', and 'Help'. Below this is a sub-menu bar with 'New Message' (highlighted), 'Inbox', 'Outbox', and 'Message History'. The main content area has a section titled 'Select resources:' with the instruction 'Select each resource you wish to send a message to. You may select more than one.' Below this is a row of checkboxes for resources: 'Zeon 606', 'Zeon 611', 'Zeon 66131', 'Zeon 665', 'Zeon 673', and 'Zeon 679'. There are links for 'Select All' and 'Select None'. Below this is a section titled 'Message Text:' with the instruction 'Type the message you wish to send in the box below. Message character limit is indicated in the top right hand corner of the messaging window.' There is a large text input box with a character count '0/0' in the top right corner. At the bottom is a 'Send' button.

## Inbox and Outbox

trackZEON's inbox and outbox contain all messages sent and received.

*Example of the Inbox interface*

zeon Map <b>Messaging</b> Reports Help				
New Message   <b>Inbox</b>   Outbox   Message History				
Status	From	Sender	Message	Date Received
•	Zeon 673		Battery Low	24/09/2008 03:00 pm
•	Zeon 679		Got it	24/09/2008 02:10 pm
•	Zeon 611		Battery Low	23/09/2008 12:41 pm
•	Zeon 665		Battery Low	17/09/2008 03:01 am
Shows the latest messages received from your resources.				 0 new messages.

*Example of the Outbox interface*

zeon Map <b>Messaging</b> Reports Help				
New Message   Inbox   <b>Outbox</b>   Message History				
Status	To	Sender	Message	Date Received
•	Zeon 665		Testing the queue once more	24/09/2008 05:14 pm
•	Zeon 679		Testing another another queued message	24/09/2008 02:56 pm
•	Zeon 611		test queue again	Queued for delivery.
•	Zeon 606		please call 7534	18/08/2008 11:39 am
Shows the latest messages sent to each resource.				 0 new messages.

## Message History

trackZEON allows you to retrieve all of the messages that have been sent and received, for any radio, for up to one month in the past.

Selecting message history in the menu bar will create drop down menus containing the following parameters:

- Resources  
You may choose the resource for which you wish to obtain the messaging history.
- Start Date and End Date  
You may specify the period for which you wish to obtain the messaging history.

*Example of the Message History interface*

zeon Map <b>Messaging</b> Reports Help				
New Message   Inbox   Outbox   <b>Message History</b>				
Resource:	<input type="text" value="Zeon 606"/>	Start Date:	<input type="text" value="16/09/2008"/>	End Date: <input type="text" value="16/09/2008"/> <input type="button" value="Go"/>
Status	Resource Name	Sender	Message	Date Received
Please select a resource, start date and end date to view.				
To view today's messages select today's date in both date boxes. Messages will be update automatically as they are sent, when viewing today's messages.				

## REPORTS

trackZEON provide a number of reports to assist with interpreting the data received by each resource. Selecting Reports in the menu bar will open a new page that will allow you to choose from two different types of reports:

- Standard Reports
- Activity Reports

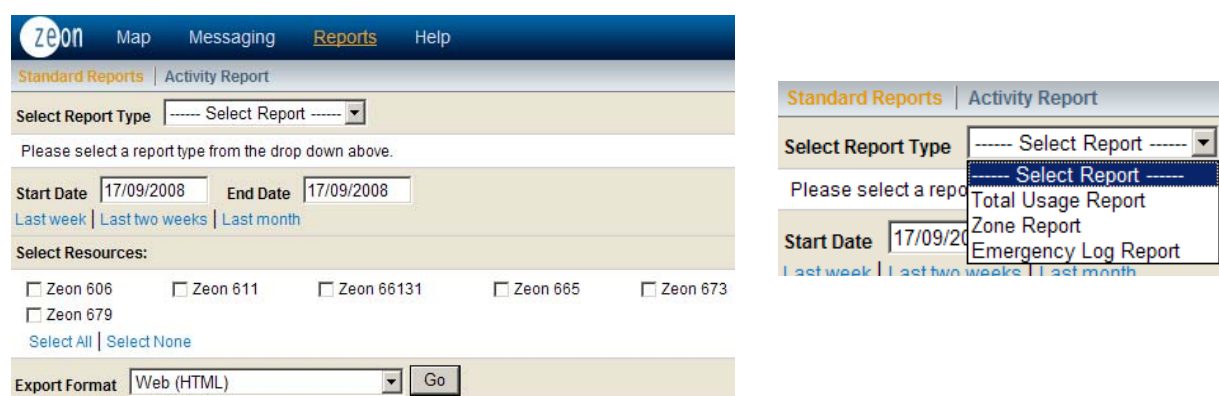

All reports can retrieve information for up to one month in the past, which can be exported as web (HTML), Microsoft Excel (XLS) or Comma Separated Value (CSV) files.

### Standard Reports

The standard report interface provides three report options:

- Total Usage Report
- Zone Report
- Emergency Log Report

*Example of the Standard Reports interface and drop down menu*

### Total Usage Report

This report provides you with a summary of the activity of a resource, such as the resource's location and status, for the specified period. Tick the 'show latitude and longitude' box to include the resource's geographic position within your report.

*Example of a Total Usage Report*

### Total Usage Report for 17/09/2008

Generated on: 17/09/08

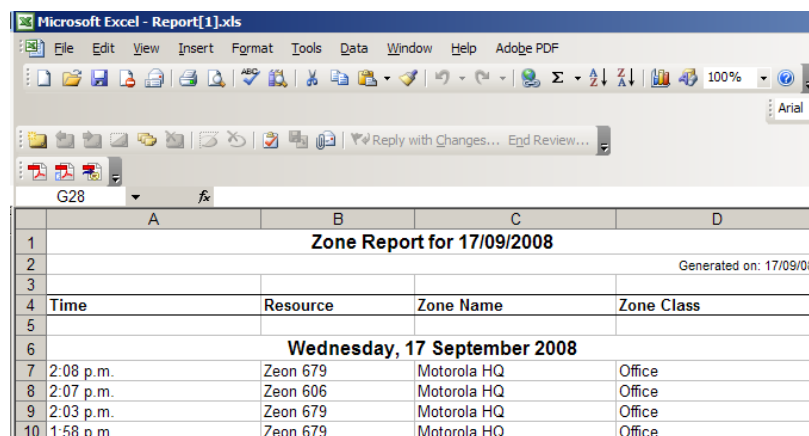

Resource	Icon	Status	Time	Address
<b>Wednesday, 17 September 2008</b>				
Zeon 679		ON	6:19 p.m.	Burwood Highway, Vermont South
Zeon 679		ON	6:20 p.m.	Burwood Highway, Wantirna
Zeon 679		ON	6:22 p.m.	Jessica Close, Wantirna South
Zeon 679		ON	6:22 p.m.	Jessica Close, Wantirna South
Zeon 679		ON	6:23 p.m.	High Street Road, Wantirna South
Zeon 679		ON	6:24 p.m.	Cathies Lane, Scoresby
Zeon 679		ON	6:25 p.m.	Dalmore Drive, Scoresby
Zeon 679		ON	6:25 p.m.	Dalmore Drive, Scoresby
Zeon 679		ON	6:26 p.m.	Corporate Avenue, Rowville
Zeon 679		ON	6:27 p.m.	Lim Court, Mulgrave

### Zone Report

This report will provide a summary of the Smart Zones a resource has entered for the specified period. A smart zone is the area surrounding a map tag. See Right Click Functionality/Tag Map Here in this user manual for further details.

It is possible to generate a zone report to establish a retrospective query of the activity of your resources within a particular location. Follow the steps detailed Right Click Functionality/Tag Map Here to review your resources' activity within a particular location, for up to one month in the past.

#### Example of a Zone Report

Zone Report for 17/09/2008			
Generated on: 17/09/08			
Time	Resource	Zone Name	Zone Class
<b>Wednesday, 17 September 2008</b>			
2:08 p.m.	Zeon 679	Motorola HQ	Office
2:07 p.m.	Zeon 606	Motorola HQ	Office
2:03 p.m.	Zeon 679	Motorola HQ	Office
1:58 p.m.	Zeon 679	Motorola HQ	Office

### Emergency Log Report

This report will provide a summary of the details relating to when an emergency is received, and the action taken by the trackZEON operator. See 'What happens in an emergency' in this user manual for further details.

#### Example of an Emergency Log Report

Emergency Log Report for 17/09/2008		Generated on: 17/09/08
Time	Log Message	
<b>Zeon 611 - 17/09/2008 03:56:55 p.m. - CLEARED</b>		
17/09/2008 03:56:55 p.m.	Received <b>NEW</b> Emergency Alert at Wesley Court, Burwood East.	
17/09/2008 04:29:51 p.m.	Ben Marshall (username: zeontest) <b>CLEARED</b> Emergency Alert(s) taking the following action - Security guard (ID 354) confirmed emergency is cleared. Everyone is ok..	

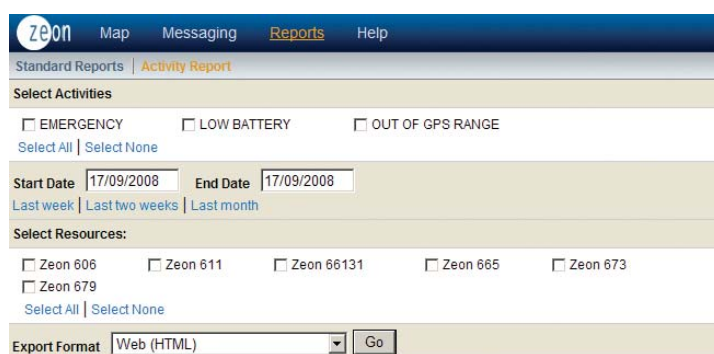

### Activity Reports

The activity report interface provides four report options:

- Emergency
- Low Battery
- Out of GPS Range

This report will provide a summary of when any resource has engaged the selected activities for the specified period.

#### Example of the Activity Reports interface

*Example of an Activity Report for an emergency query*

Activity Report for 17/09/2008			
Generated on: 17/09/08			
Resource	Status	Time	Address
Zeon 611	EMERGENCY, ON	17-09-2008 15:56	Wesley Court, Burwood East
Zeon 611	EMERGENCY, ON	17-09-2008 15:57	Wesley Court, Burwood East
Zeon 611	EMERGENCY, ON	17-09-2008 15:57	Wesley Court, Burwood East
Zeon 611	EMERGENCY, ON	17-09-2008 15:58	Wesley Court, Burwood East
Zeon 611	EMERGENCY, ON	17-09-2008 15:58	Wesley Court, Burwood East

Zeon 611	EMERGENCY, ON	17-09-2008 15:59	Wesley Court, Burwood East
Zeon 611	EMERGENCY, ON	17-09-2008 16:00	Wesley Court, Burwood East

Data is stored by trackZEON for a continuously rolling four week period.  
Export and save important reports to your computer to retain a permanent record.

## HELP

Selecting Help will open the trackZEON user manual to read online.

## **LOG OUT**

Selecting Log Out from the upper right hand corner of the menu bar will log users out of trackZEON. The system will automatically revert to the trackZEON login page for the next user.
